

OPERATIONAL FLOW GUIDE

KL Chicken Wings

Point of Sale System

Dine-in, Takeout, Store Delivery, GrabFood, Kitchen, Payment, and Shift Operations

Document Purpose and Scope

This guide defines the planned operating flow for the KL Chicken Wings point of sale system. It aligns the cashier, kitchen, manager, and owner around one transaction record from shift opening through order completion and end-of-day reporting.

Confirmed sales channels: Dine-in, walk-in/takeout, KL Chicken Wings store delivery, and GrabFood.

Operating Principles

- Every employee uses an individual account or PIN; shared cashier accounts are not permitted.
- Every order has exactly one sales channel and a traceable status history.
- Cash, store-delivery collections, digital payments, and prepaid GrabFood transactions are reported separately.
- Sensitive actions require a manager approval PIN and a recorded reason.
- Completed transactions are never physically deleted; corrections remain visible in the audit trail.
- Inventory movements are linked to confirmed orders, cancellations, wastage, or authorized adjustments.

User Roles

Role	Primary responsibility
Owner / Admin	Controls the system, business configuration, financial reporting, user access, and final reconciliation.
Manager / Supervisor	Controls daily operations, approvals, inventory supervision, exceptions, and shift review.
Cashier	Processes customer and GrabFood orders, payments, receipts, and assigned shift activities.
Kitchen Staff	Prepares orders from kitchen tickets and maintains accurate production statuses.
Store Delivery Rider	Delivers assigned store orders, updates delivery status, collects authorized COD payments, and remits collections.

Customers and GrabFood riders do not receive POS user accounts. Authorized store-delivery riders may receive a limited rider account or PIN. Kitchen and rider users cannot change prices or view financial reports, while only the owner/admin can create users or change permissions.

Owner / Administrator Responsibilities

- Create, activate, deactivate, and assign roles to employee accounts.
- Configure store information, terminals, printers, receipt settings, payment methods, and operating rules.
- Create and maintain menu categories, products, flavors, sizes, add-ons, combos, availability, and channel-specific prices.
- Configure discount rules, manager approval requirements, refund rules, and inventory behavior.
- View all sales, payment, inventory, shift, exception, audit, and GrabFood reconciliation reports.
- Review and reconcile GrabFood gross sales, commissions, other deductions, and net payouts.
- Manage backup, restore, data retention, and system maintenance procedures.
- Review the audit trail and investigate unusual transactions or access activity.

Owner restriction: Administrative access must not bypass the audit trail. Changes to prices, permissions, settings, or reconciled records must record the administrator and timestamp.

Manager / Supervisor Responsibilities

- Monitor open shifts, active orders, kitchen workload, and order delays.
- Approve permitted discounts, cancellations, voids, refunds, price overrides, and cash adjustments using an individual manager PIN.
- Review the original transaction, reason, financial effect, and inventory effect before approving an exception.
- Receive stock, record wastage, authorize stock adjustments, and review low-stock warnings.
- Review cashier closing counts, shortages, overages, and supporting explanations.
- Reprint operational and shift reports when authorized.
- Resolve duplicate, incomplete, delayed, or cancelled GrabFood orders while preserving their reference numbers.
- Escalate suspected fraud, repeated variances, or system problems to the owner/admin.

Manager restriction: A manager cannot approve their own restricted transaction when separation of duties is enabled. Manager approval does not delete or hide the original record.

Cashier Responsibilities

- Log in with an individual account and protect the assigned PIN.
- Open a shift, enter the starting drawer cash, and verify the assigned terminal.
- Select the correct order channel: dine-in, takeout, or GrabFood.

- Encode products, quantities, sizes, flavors, add-ons, special instructions, and GrabFood reference numbers accurately.
- Review the order with the customer or merchant device before confirming it.
- Receive approved payment types, record external payment references when required, issue change, and print receipts.
- Send confirmed orders to the kitchen and monitor ready orders for service or release.
- Verify the order or reference number before releasing takeout and GrabFood packages.
- Request manager approval for discounts, cancellations, voids, refunds, or cash adjustments.
- Count the physical drawer, submit the closing amount, and explain any reported variance.

Cashier restriction: Cashiers cannot change menu prices, delete completed transactions, edit closed shifts, approve their own restricted actions, reconcile GrabFood payouts, or manage employee permissions.

Kitchen Staff Responsibilities

- Log in to the kitchen display or use authorized kitchen access.
- Read each ticket carefully, including channel, quantities, flavors, modifiers, and special instructions.
- Prepare tickets in the correct sequence while following any approved priority rules.
- Update tickets promptly from Queued or Accepted to Preparing and then Ready.
- Coordinate missing, unavailable, duplicated, or unclear items with the cashier or manager before preparation continues.
- Confirm that the complete order is plated or packed before marking it Ready.
- Maintain accurate production status so service staff and cashiers can release the correct order.
- Report wastage, remakes, and ingredient shortages through the authorized process.

Kitchen restriction: Kitchen staff cannot change prices, discounts, customer payments, cashier shifts, refunds, user access, inventory counts, or financial reports.

Store Delivery Rider Responsibilities

- Accept only deliveries assigned through the authorized store-delivery process.
- Verify the order number, package count, customer name, contact number, address, landmarks, and delivery instructions before dispatch.
- Protect customer contact and address information and use it only to complete the assigned delivery.

- Update the order from Ready for Dispatch to Out for Delivery and then Delivered, Failed, or Returned.
- For cash-on-delivery orders, collect the exact amount due and safeguard the collection until remitted.
- Obtain delivery confirmation according to store policy and record delivery time.
- Return undelivered products and report unreachable customers, wrong addresses, refusals, shortages, or payment problems immediately.
- Remit COD collections to the cashier or manager and obtain POS confirmation before ending the delivery assignment.

Rider restriction: Store-delivery riders cannot change product prices, discounts, order contents, payment totals, refunds, inventory balances, employee permissions, or financial reports.

Responsibility and Approval Matrix

Activity	Responsible role	Approval / control
Open or close cashier shift	Cashier	Manager reviews variances
Create dine-in or takeout order	Cashier	No approval normally required
Encode and release GrabFood order	Cashier	Manager handles exceptions
Update preparation status	Kitchen Staff	No financial authority
Apply controlled discount	Cashier requests	Manager approves
Cancel, void, or refund	Cashier requests	Manager approves
Adjust stock or record wastage	Manager or authorized staff	Manager accountable
Change menu price or permissions	Owner / Admin	Audit record required
Reconcile GrabFood payout	Owner / Admin	Supporting payout reference required
Backup or restore system data	Owner / Admin	Follow maintenance procedure
Deliver order and remit COD	Store Delivery Rider	Cashier or manager verifies delivery and remittance

Overall Transaction Flow

Stage	Action	System result
1. Authenticate	Employee logs in with an individual account or PIN.	Active user session
2. Open shift	Cashier records the starting cash drawer amount.	Open cashier shift
3. Select channel	Cashier selects dine-in, takeout, store delivery, or GrabFood.	Channel-tagged order
4. Build order	Products, sizes, flavors, quantities, and add-ons are selected.	Priced order draft
5. Send to kitchen	Confirmed items are issued as a labeled kitchen ticket.	Queued kitchen order
6. Prepare and release	Kitchen advances the order through its status flow.	Served or picked-up order
7. Settle and record	Payment, inventory, sales, and audit records are finalized.	Completed transaction
8. Close shift	Cashier counts the drawer and submits reconciliation.	Locked shift report

1. Start-of-Shift Flow

1. Cashier signs in using the assigned username and PIN.
2. The system checks the user role and whether another shift is already active for that cashier or terminal.
3. Cashier selects Open Shift and enters the physical starting cash in the drawer.
4. The system records cashier, terminal, opening amount, date, and opening time.
5. The POS ordering screen becomes available only after the shift opens.

Control: A cashier cannot process cash sales without an open shift. Starting cash is not counted as revenue.

2. Common Order-Entry Flow

6. Select Dine-in, Takeout, Store Delivery, or GrabFood before adding products.
7. Add products from menu categories such as wings, combos, rice, drinks, dips, and add-ons.
8. For each wing item, select the required serving size, flavor, quantity, and allowed modifiers.
9. The system validates required selections, item availability, channel pricing, and duplicate GrabFood references.
10. Cashier reviews the order summary, taxes or charges, discounts, and total.
11. Confirm the order and send its kitchen ticket.

Pricing Rule

Dine-in and takeout may share the standard store price. GrabFood may use a separate channel price. The system stores the price actually used on each order so later menu changes do not rewrite historical sales.

3. Dine-in Flow

12. Cashier selects Dine-in and assigns a table number when table management is enabled.
13. Items are confirmed and sent to the kitchen before the guest pays.
14. Kitchen marks the ticket Preparing and then Ready; service staff marks it Served when delivered.
15. Additional items may be added to the same open order and sent as a new kitchen batch.
16. Cashier opens the final bill, applies any authorized discount, and receives payment.
17. The receipt prints, inventory is finalized, the order becomes Completed, and the table becomes available.

Recommended policy: Require payment before an order is marked Completed. An open dine-in bill remains visible until fully settled or cancelled with approval.

4. Takeout Flow

18. Cashier selects Takeout and optionally records a customer name or queue number.
19. Cashier completes item and modifier selection, then confirms the total.
20. Customer pays before preparation. The system prints the customer receipt and a TAKEOUT kitchen ticket.
21. Kitchen marks the order Preparing and then Ready.
22. Staff verifies the queue number or receipt and releases the order.
23. Order becomes Completed after release.

5. GrabFood Flow

24. The GrabFood order arrives on the store merchant device.
25. Cashier selects GrabFood in the POS and enters the GrabFood order/reference number.
26. Cashier encodes the exact products, serving sizes, flavors, quantities, and add-ons shown on the merchant device.
27. The POS applies GrabFood channel pricing and checks that the reference number has not already been used.
28. Cashier confirms the order. The kitchen receives a ticket prominently labeled GRABFOOD.
29. Kitchen advances the order from Accepted to Preparing and then Ready.
30. Staff verifies the rider and reference number before releasing the package.
31. Staff marks the order Picked Up. Inventory and GrabFood sales records are finalized.
32. Because the order is prepaid through GrabFood, the amount is not added to the cashier cash drawer.
33. The owner later reconciles recorded orders, cancellations, platform deductions, commission, and net payout.

Duplicate prevention: The GrabFood reference number must be unique. If a duplicate is entered, the cashier must review the existing order instead of creating another sale.

GrabFood Data Requirements

Field group	Required behavior
Reference	GrabFood order/reference number; required and unique.
Pricing	GrabFood channel price captured per item at time of order.
Status	Accepted, Preparing, Ready, Picked Up, or Cancelled.
Financials	Gross sale, commission, other deductions, and net receivable.
Settlement	Unreconciled or reconciled, with payout date/reference when available.
Cancellation	Reason, timestamp, responsible employee, and manager approval when required.

6. Store Delivery Flow

34. Cashier selects Store Delivery as the sales channel.
35. Cashier records the customer name, mobile number, complete address, landmarks, delivery zone, and delivery instructions.

36. The POS determines or records the delivery fee and confirms whether the address is serviceable.
37. Cashier enters products, quantities, serving sizes, flavors, add-ons, and special instructions.
38. Cashier records the payment arrangement as prepaid digital payment or cash on delivery, according to store policy.
39. The kitchen receives a ticket clearly labeled STORE DELIVERY and prepares the order.
40. When the order is Ready for Dispatch, the cashier or manager assigns an authorized store-delivery rider.
41. The rider verifies the order and customer details, then marks the order Out for Delivery.
42. After successful handoff, the rider marks the order Delivered and records delivery confirmation.
43. For cash on delivery, the rider remits the collection to the cashier or manager; the POS links the remittance to the order.
44. A failed or returned delivery requires a reason, manager review, payment disposition, and inventory disposition.

Cash control: Cash-on-delivery funds remain an outstanding rider collection until the cashier or manager confirms remittance. They must not be treated as drawer cash before remittance.

Store Delivery Data Requirements

Field group	Required behavior
Customer	Name and mobile number; required for delivery coordination.
Address	Complete address, barangay or zone, landmarks, and delivery instructions.
Delivery charge	Delivery fee and any approved fee adjustment recorded separately from food sales.
Rider	Assigned rider, dispatch time, delivery time, and rider status.
Payment	Prepaid digital or cash on delivery, including payment reference or COD amount.
Status	Confirmed, Preparing, Ready for Dispatch, Out for Delivery, Delivered, Failed, Cancelled, or Returned.
Exception	Failure or return reason, manager review, refund decision, and inventory disposition.

7. Kitchen Flow

Kitchen tickets are displayed or printed in time order and clearly labeled DINE-IN, TAKEOUT, STORE DELIVERY, or GRABFOOD. A ticket includes order number, channel, order time, products, quantities, flavors, modifiers, and special instructions.

Status	Meaning	Updated by
Queued / Accepted	Kitchen has received the confirmed ticket.	Kitchen
Preparing	Food preparation has started.	Kitchen
Ready	All items are complete and packed or plated.	Kitchen
Served	Dine-in order has been delivered to the table.	Service / Cashier
Released	Takeout order has been handed to the customer.	Cashier / Service
Picked Up	GrabFood order has been handed to the verified rider.	Cashier / Service
Ready for Dispatch	Store-delivery order is packed and ready for rider assignment.	Kitchen / Cashier
Out for Delivery	Assigned store rider has departed with the verified order.	Store Delivery Rider
Delivered	Customer has received the store-delivery order.	Store Delivery Rider

Restriction: Kitchen staff can update preparation statuses but cannot alter prices, payments, discounts, or completed transactions.

8. Payment and Receipt Flow

Payment type	POS treatment
Cash	Included in expected drawer cash. Cash received and change are recorded.
GCash / Maya	Recorded as digital payment with an optional external reference number.
Card	Recorded separately with an optional approval/reference number.
Split payment	Two or more permitted tenders must exactly settle the order balance.
GrabFood prepaid	Recorded as GrabFood receivable; excluded from physical drawer cash.
Store delivery prepaid	Recorded as digital payment before dispatch with an optional payment reference.
Store delivery COD	Recorded as rider collection until cash is remitted and confirmed by the cashier or manager.

45. Cashier selects the payment method and enters the tendered amount or external reference.
46. The system validates that the full balance is settled.
47. The transaction is committed and receives a permanent receipt/order number.
48. Inventory, sales, payment, and audit records are written together.
49. The receipt prints. Reprints retain the original receipt number and are marked as reprints.

9. Cancellation, Void, and Refund Flow

Action	When used	Required control
Cancel	Before completion; usually before or during preparation.	Reason required; manager approval based on policy.
Void	Reverse an incorrectly completed transaction.	Manager PIN, reason, linked reversal, and audit record.
Refund	Return money after a valid payment.	Manager approval, refund method, amount, reason, and stock decision.
GrabFood cancellation	Cancel a platform order while retaining its reference.	Platform reason/status, timestamp, and reconciliation visibility.

50. Cashier opens the affected order and requests the appropriate action.
51. The system requires a reason and displays the financial and inventory effect.
52. Manager reviews the request and enters an approval PIN.
53. The system creates a linked correction record rather than deleting the original transaction.

54. Inventory is returned only when the item is physically reusable according to store policy.
55. The action appears in shift, daily, and audit reports.

10. Inventory Flow

The initial design must support automatic stock deduction from completed or confirmed orders. Recipes can later deduct wing pieces, sauces, rice, drinks, packaging, and other ingredients. All manual adjustments require a quantity, reason, employee, and timestamp.

- Sale or confirmed production deducts the configured product or recipe quantities.
- Receiving adds stock and records supplier or receiving reference details when used.
- Wastage, spoilage, staff meal, and count correction are separate adjustment reasons.
- Cancelled or refunded items return to stock only after an authorized stock disposition decision.
- Low-stock thresholds generate a warning without blocking sales unless configured.

11. End-of-Shift Flow

56. Cashier selects Close Shift and stops accepting new cash transactions.
57. The system calculates expected cash from opening cash, cash sales, cash refunds, and authorized cash movements.
58. Cashier counts the physical drawer and enters the actual amount.
59. The system calculates shortage or overage.
60. Cashier submits the count; a manager reviews discrepancies according to store policy.
61. The system generates a shift report and locks the shift from ordinary editing.

Shift Report Contents

- Dine-in, takeout, store delivery, and GrabFood sales totals.
- Cash, store-delivery collections, GCash, Maya, card, split-payment, and GrabFood prepaid totals.
- Opening cash, cash movements, expected cash, actual cash, and variance.
- Discounts, cancellations, voids, refunds, and manager approvals.
- Order counts, item quantities, and cashier identity.
- Unreconciled GrabFood sales and unremitted store-delivery collections are reported separately from physical cash.

12. Owner and Manager Review Flow

62. Review shift exceptions, cash variances, cancelled orders, voids, and refunds.
63. Review daily sales by channel, product, flavor, cashier, rider, and payment method.
64. Review low-stock items and authorized inventory adjustments.
65. Review store-delivery performance, delivery fees, failed or returned orders, rider assignments, and unremitted COD collections.
66. Compare GrabFood gross orders with platform commissions, deductions, and payout records.
67. Mark GrabFood batches reconciled only when the recorded net receivable agrees with the payout.
68. Export or preserve reports according to store and regulatory requirements.

13. Core Acceptance Checklist

- [] A cashier cannot sell without an open shift.
- [] The sales channel is visible on the order, kitchen ticket, receipt, and reports.
- [] Required wing flavor and modifier choices cannot be skipped.
- [] A GrabFood reference number cannot be used twice.
- [] A store-delivery order requires customer contact, address, delivery fee, payment arrangement, and rider status.

- [] Cash-on-delivery collections remain traceable from rider assignment through cashier remittance.
- [] GrabFood prepaid sales never increase expected drawer cash.
- [] Kitchen staff cannot access pricing or financial functions.
- [] Completed orders cannot be deleted.
- [] Voids, refunds, and controlled cancellations record manager approval and a reason.
- [] The shift report calculates expected versus actual cash.
- [] Inventory and sales remain traceable to their originating order or adjustment.

Planning Items Requiring Final Confirmation

- Whether dine-in table numbers will be enabled at launch.
- Exact payment methods accepted by the store.
- Store-delivery coverage area, delivery-fee rules, rider assignment method, and maximum delivery distance.
- Store-delivery prepaid methods, cash-on-delivery policy, rider cash limits, and remittance procedure.
- Whether GrabFood orders are always prepaid for this branch.
- Manager approval thresholds for discounts, cancellations, voids, and refunds.
- Whether initial inventory tracks finished products or ingredient recipes.
- Receipt and kitchen printer models, cash drawer connection, and terminal count.
- Whether printed output is an internal receipt only or must follow a BIR-accredited POS process.

Document status: This is a planning draft. Confirmed store policies and hardware details should be incorporated before development acceptance criteria are finalized.
